

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1-23. (Canceled)

24. (Currently Amended) A device for reproducing a content recorded on a recording medium, the device comprising:

a recording medium control module configured to reproduce the content from the recording medium;

a network control module coupled with the recording medium control module, the network control module configured to download content;

a playback control module coupled with the recording medium control module and the network control module, the playback control module configured to playback the content reproduced by the recording medium control module and/or the content downloaded by the network control module; and

a system control module coupled with the recording medium control module and the network control module, the system control module configured to control the operations of the recording medium control module and the network control module;

wherein the content recorded on the recording medium includes all of the following: audiovisual content, identification information for identifying the audiovisual content, universal resource locator (URL) information for indicating a location of a related content which relates to the audiovisual content, and data which includes information which is ~~configured~~ represents a first state to direct the related content to be downloaded or a second state to direct the related content to be downloaded and played back;

wherein the recording medium control module reproduces the data on the recording medium, and

wherein the system control module determines whether a request to is for downloading the related content or for downloading and playing back the related content, is determined by the reproducing of the data which includes information represents the first or second state; and

wherein, if the data includes information which represents the first state that the related content is to be downloaded ~~or played back~~, the system control module is further configured to instruct the network control module to connect with the server using the URL information and the data reproduced by the recording medium control module, to send the content identification information reproduced by the recording medium control module to the server, to download the related content from the server using the data to execute a command to connect the device to the server automatically after the reproduction of the data, and[[:]]

wherein, if the data includes information which represents the second state that the related content is to be downloaded and played back, the system control module is further configured to instruct the network control module to connect with the server using the URL information and the data reproduced by the recording medium control module, to send the content identification information reproduced by the recording medium control module to the server, to download the related content from the server using the data to execute a command to connect the device to the server automatically after the reproduction of the data, and to instruct the playback control module to play back the related content, automatically, if the data includes information which represents that the related content is to be played back.

25. (Currently Amended) A method for reproducing a content recorded on a recording medium, the method comprising:

reproducing audiovisual content, identification information for identifying the audiovisual content, universal resource locator (URL) information for indicating a location of a related content which is related to the audiovisual content, and data which includes information ~~which is configured~~ represents a first state to direct the related content to be downloaded or a second state to direct the related content to be downloaded and played back;

reproducing the data on the recording medium, ~~wherein~~

determining whether a request to is for downloading the related content or for downloading and playing back the related content, is determined by the reproducing of the data; which includes information represents the first or second state;

if the data includes information which represents the first state that the related content is to be downloaded ~~or played back~~, connecting with the server, automatically after the reproduction of the data, using the URL information and the data reproduced from the recording medium~~[[;]]~~, sending the content identification information reproduced from the recording medium to the server; and

if the data includes information which represents the second state that the related content is to be downloaded and played back, connecting with the server, automatically after the reproduction of the data, using the URL information and the data reproduced from the recording medium, sending the content identification information reproduced from the recording medium, sending the content identification information reproduced from the recording medium to the server, downloading the related content from the server; playing back the audiovisual content which is reproduced from the recording medium; and automatically playing back the related content which is downloaded from the server, if the data includes information which represents that the related content is to be played back.

26. (Cancelled)

27. (Currently Amended) A method for recording a content on a recording medium comprising:

recording an audiovisual content, recording an identification information for identifying the audiovisual content, recording a URL information indicating a location of a related content relating to the audiovisual content; and

recording data which includes information which ~~is configured~~ represents a first state to direct the related content to be downloaded or a second state to direct the related content to be downloaded and played back;

wherein the data on the recording medium is reproduced by the reproducing device and, wherein whether a request to is for downloading the related content or downloading

and playing back the related content is determined by the reproducing of the data which includes information represents the first or second state; and,

wherein the URL information and the data are used for connecting with the server, sending the content identification information to the server automatically after the reproduction of the data, downloading the related content from the server, ~~and automatically playing back the related content which is downloaded from the server,~~ if the data includes information which represents the first state that the related content is to be downloaded played back; and

wherein the URL information and the data are used for connecting with the server, sending the content identification information to the server automatically after the reproduction of the data, downloading the related content from the server, and automatically playing back the related content which is downloaded from the server, if the data includes information which represents the second state that the related content is to be downloaded and played back.
